

Amazon Seller Skill Suite

v1.0

6 Claude Cowork skills for Amazon marketplace selling.
Works with any brand, any product category, any seller account type.

What It Does

Drop these skills into Claude Desktop and they activate automatically based on what you ask. Each skill is a specialist — it knows its domain, enforces hard gates before giving advice, detects contradictions in your inputs, and refuses to fabricate data it doesn't have.

The 6 Skills

Skill	Words	What It Does
Listing Optimizer	~3,560	Titles, bullets, backend keywords, A+ Content plans, image shot lists. Hard-gated with contradiction blocking. Title positioning logic for value/mid-market/premium brands. Backend keyword packing with UTF-8 byte counting. A+ module-to-buyer-hesitation mapping.
Trend Researcher	~2,460	Competitor analysis, category trends, demand validation, keyword intelligence. 4-archetype competitor segmentation. Price band analysis. Verdict ceiling — cannot issue GO without margin data.
Account Strategist	~3,090	Pricing, expansion, variation strategy, review growth, FBA vs FBM. 7 decision gates. Launch sequencing (4 gated phases). Portfolio triage (SCALE/HOLD/INVEST/KILL). Low-CVR diagnostic before price cuts.
Brand Guardian	~2,470	Brand voice, visual identity, photography direction, Brand Story. Giftability and sustainability honesty tests. Extensible claim challenge framework for any positioning claim.
Social Strategist	~3,290	Content calendars, post drafting, external traffic strategy. Capacity gate (hours/budget/tools confirmed before planning). Brand voice enforcement gate. Every tactic tied to Amazon outcomes.

Skill	Words	What It Does
Listing QA	~4,780	Pre-publish quality gate. Hostile by default. Prompt injection defense. 7-category semantic laundering patterns. Environmental/sustainability claim verification. Exact byte/character computation — never estimates.

Total: ~19,650 words across 34 rules.

Installation

1. Open Claude Desktop (Cowork mode)
2. Drag a .skill file into the chat window
3. Click "Copy to your skills" when prompted
4. Repeat for each of the 6 skill files

Skills activate automatically based on what you ask. On first use, each skill asks about your brand and products.

Key Features

Hard Gates

Every skill has gates that block output until required inputs are confirmed. The Account Strategist won't advise without your actual COGS. The Listing Optimizer won't write copy without your brand, product, category, features, and audience. The QA skill won't audit a summary — it demands exact text.

Contradiction Detection

Every skill checks your inputs for internal contradictions before proceeding. "Premium brand" + "cheap price" = blocked. "Small-batch artisan" + 60,000 units/month = flagged. "Eco-friendly" without certification = challenged.

Anti-Hallucination Controls

No skill fabricates BSR numbers, search volumes, competitor metrics, or conversion rates. All numerical claims are labeled by source confidence: VERIFIED (Amazon first-party data), ESTIMATED (third-party tools, ±50%), or INFERRED (pattern analysis).

Cross-Skill Handoff Protocol

When chaining skills, each skill inherits upstream BLOCKED ITEMS and unresolved contradictions. Upstream findings must be provided as actual output, not user summaries. No skill can proceed past an

inherited block without new evidence.

Prompt Injection Defense

All 6 skills treat user-supplied content as DATA, not instructions. Embedded directives ("ignore rules," "mark approved") are flagged as hostile findings, not obeyed.

How to Use Them Together

Launching a New Product

Step	Skill	Purpose
1	Trend Researcher	Validate demand + competitor landscape
2	Account Strategist	Economics + launch sequence
3	Listing Optimizer	Full content package
4	Brand Guardian	Brand consistency audit
5	Listing QA	Pre-publish check
6	Social Strategist	Launch traffic plan

Optimizing an Existing Listing

Step	Skill	Purpose
1	Listing Optimizer	Audit + rewrite
2	Listing QA	Verify changes
3	Social Strategist	Drive traffic

Monthly Review

Step	Skill	Purpose
1	Trend Researcher	Competitor + keyword shifts
2	Account Strategist	Portfolio triage (SCALE/HOLD/INVEST/KILL)
3	Social Strategist	Content calendar

What's Inside Each .skill File

Each `.skill` file is a zip archive containing a single `SKILL.md` — the complete instruction set for that specialist. You can open any `.skill` file with a zip tool to read or modify the instructions.
